Wabtec CORPORATION

Wabtec's Digital Solutions

RailConnect™ Visibility and Planning

Core Capabilities

- Shipper demand forecast (30 days)
- Inbound real time view
- Rail yard visibility
- Planning and demand forecast
- Dynamic ETAs

Differentiating Features

- Holistic rail integration: Short line and Class 1
- Workload planning
- Work order automation
- Operational metrics

Optimized Outcomes

- Advance visibility
- Predictability in delivery performance
- Productivity and efficiency
- Service excellence

Unlock data to better track and organize railcar shipments

Supply chains face a dynamic environment: new sources of competition, operational complexity, flux in global trade policy, and the need for greater levels of productivity. And all of this is against the backdrop of an economy where expectations for delivery are becoming shorter and more exacting. Optimizing the flow of goods is all about gaining improved visibility into the supply chain and using that information to drive performance.

RailConnect Visibility and Planning alleviates the complexities of the supply chain, enabling informed, real-time decision-making and bringing predictability and efficiency to freight rail.
