

# Wabtec's optimized integrated electric drive system.

## The power is inside.

GE Transportation, now a Wabtec company, introduced the first commercially viable electric drive system for large mining haul trucks in the early 1960's. Since then, the company has led the industry in the introduction of new technology to improve the truck's cost per ton.

These innovations have included the first solid-state control system, the first trolley assist technology for large haul trucks, the first AC electric drive system and the first demonstration of hybrid energy storage.

Wabtec offers the most complete line of AC electric drive systems in the industry ranging from 100 - 400 ton capacity. With service-proven transmission and electric components, the company is the recognized industry leader in electric drive systems.
